

Bentley Designs is one of the leading suppliers of quality furniture in the U.K and Ireland. Established in 1988 Bentley Designs uses the highest grade and environmentally friendly materials to produce design-led quality products at affordable prices.

Bentley Designs has a policy of continual investment in technology including software and the most up to date automated finishing lines and processing machinery. This philosophy applies not only to its productions systems but also to its back-office systems.

**Implemented:**

2005

**WinDIP Components:**

Core System

Exchequer Plug-In

Bentley Designs approached Gateway Computing in August 2004, as a user of the Exchequer Enterprise accounting solution with a requirement to attach various sales related scanned documents to the accounting transactions to which they relate. Gateway proposed its flagship WinDIP Enterprise product amongst some stiff competition from other vendors and was able to demonstrate the seamless integration between the capture of the scanned image and the retrieval from within the accounting system.

In April 2005 Bentley Designs introduced WinDIP Enterprise and is now able to view scanned images of customer orders and signed delivery notes from within Exchequer Enterprise resulting in higher levels of

productivity and ultimately providing a better service to the customer.

Kunjil Shah, Financial Controller said, "Bentley Designs have been impressed by Gateway's rapid response to any support issues and have found WinDIP Enterprise a very user-friendly and flexible EDM software. I would definitely recommend Gateway Computing and WinDIP Enterprise to any business using Exchequer from Iris Enterprise Software."
